

Selyutin Dmitriy

Java software developer

Profesional summary

I am a dedicated Java developer experience in commercial software development. I have a strong command of Spring framework (including Boot, MVC, Data, Security) and practical experience with Apache Kafka for asynchronous messaging. I am passionate about continuous learning, often exploring new technologies like React and Redux Toolkit in my free time.

I am goal-oriented, adaptable, and thrive in collaborative environments.

Projects

Boomerang Insurance

Java developer Aston - June 2024- January 2025

Platform for insurance, interaction with bank customers, and insurance policy management.

Responsibilities

- Development and debugging of modules for a platform based on microservices architecture.
- Integration of the application with external and internal services.
- Writing clear and stable code.
- Writing unit and integration tests in Java.
- Actively collaborating with specialists from related departments.
- Finding and justifying technically effective ways to solve business problems.
- Setting up asynchronous messaging.
- Modular and integration testing of services.
- Performance monitoring of applications, processing and visualization of logs using ELK stack.
- Collaborating with the team to solve assigned tasks.
- Testing new features and fixing identified bugs.
 - Participating in code reviews and improving code quality.

Achievements

- Developed interceptors for REST requests and other external integrations, which improved traceability and diagnosis of problems in the system, reducing debugging time by 30%.
- Migrated tests to test containers, creating conditions that closely resemble production and contributing to improved service quality.
